

LABORATORY RESULTS

Patient: Harvey Specter (PAT147)

Test Date: April 20, 2026

Ordering Physician: Dr. James Martinez, MD

TESTOSTERONE REPLACEMENT THERAPY MONITORING

Hormone Panel (Week 6 Post-TRT Initiation)

- Total Testosterone:** 687 ng/dL (Optimal - Improved) [Target: 500-900]
- Free Testosterone:** 16.2 pg/mL (Optimal - Improved) [Normal: 9.0-30.0]
- Estradiol (E2):** 32 pg/mL (Normal) [Normal: 10-40]
- SHBG:** 48 nmol/L (Normal)

Safety Monitoring

- Hematocrit:** 48% (Normal - Monitor) [Normal: 40-50%]
- Hemoglobin:** 16.2 g/dL (Normal)
- PSA:** 0.9 ng/mL (Normal, stable)

Cortisol (Follow-up)

- Morning Cortisol:** 16.2 µg/dL (Normal - Improved) [Normal: 6-23]
- DHEA-S:** 245 µg/dL (Improved)

Metabolic Panel

- Glucose (Fasting):** 94 mg/dL (Normal - Excellent improvement!)
- HbA1c:** 5.4% (Normal - Excellent!) [Normal: <5.7%]
- Creatinine:** 1.0 mg/dL (Normal)
- AST:** 28 U/L (Normal)
- ALT:** 32 U/L (Normal)

Lipid Panel

- Total Cholesterol:** 188 mg/dL (Optimal)
- LDL:** 102 mg/dL (Near Optimal)
- HDL:** 52 mg/dL (Good)
- Triglycerides:** 142 mg/dL (Normal)

Vitamin D (Follow-up)

- **25-Hydroxyvitamin D:** 48 ng/mL (Optimal - Improved)

THYROID PANEL

- **TSH:** 2.8 mIU/L (Improved)
 - **Free T3:** 3.1 pg/mL (Improved)
 - **Reverse T3:** 22 ng/dL (Normal - Improved)
-

INTERPRETATION

Excellent response to testosterone replacement therapy. Testosterone levels now in optimal range with appropriate free testosterone elevation. Estradiol well-controlled without need for aromatase inhibitor. Hematocrit within safe range but requires ongoing monitoring. Outstanding improvement in metabolic markers - patient now has normal glucose metabolism! Cortisol levels normalized, suggesting improved stress management. All safety parameters acceptable. Continue current TRT protocol.
